

Packet Tracer Mini-Lab 06: Supplement

Configuring 2 LANs/2 Routers using Config and RIP in Packet Tracer

CAVEAT: THE LABS IN CC2-180 MAY NOT WORK ENTIRELY AS PLANNED. WE WILL BE UTILIZING BOTH A SERVER 2012 R2 HOST PC AND VIRTUAL MACHINES (VMs) ON THE HOST PC, IN WHICH CASE THERE MAY BE UNFORESEEN ISSUES. AS SUCH WE WILL LIKELY GET SOME UNEXPECTED 'REAL WORLD' TROUBLESHOOTING PRACTICE AND MAY EVEN HAVE TO "WING IT"

Mini-Lab 06 Objective

The lab provides further practice in a simulated environment using Cisco's Packet Tracer application.

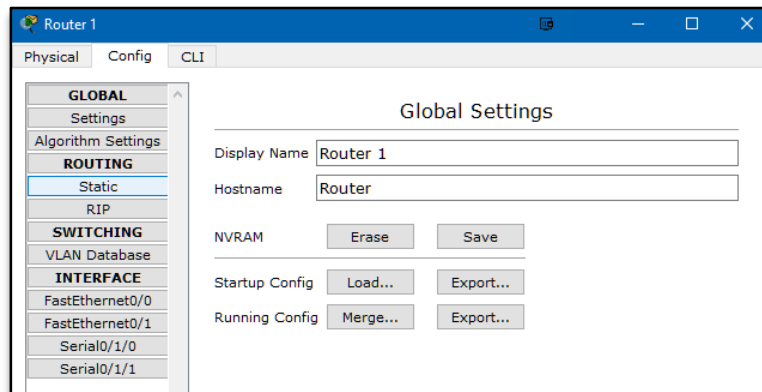

INSTRUCTIONS: You can use the **Packet Tracer project** (e.g., **minilab05.pkt**) created in **Mini-Lab 5**, which we are going to modify before starting this lab (we are going to remove the static routes in both routers, so the devices will no longer be able to ping across all the networks, then instead of using static routes we'll use the RIP routing protocol).

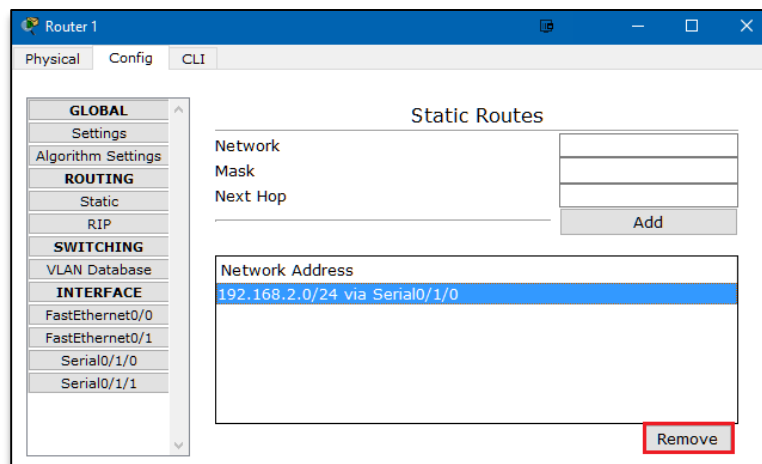

Make a copy of that project and rename it to **minilab06.pkt** (or whatever naming convention you used previously).

If you do not have a copy of the previous project, then you will have to work through **Mini-Lab 5** and save the project first before starting this lab (making sure to make a second copy of the completed lab then renaming that copy appropriately).

1. Open the copy of the project (e.g., copied/renamed **minilab06.pkt**) you created from the previous Mini-Lab 5 project (e.g., **minilab05.pkt**)
2. Click on **Router 1** and select the **Config** tab.

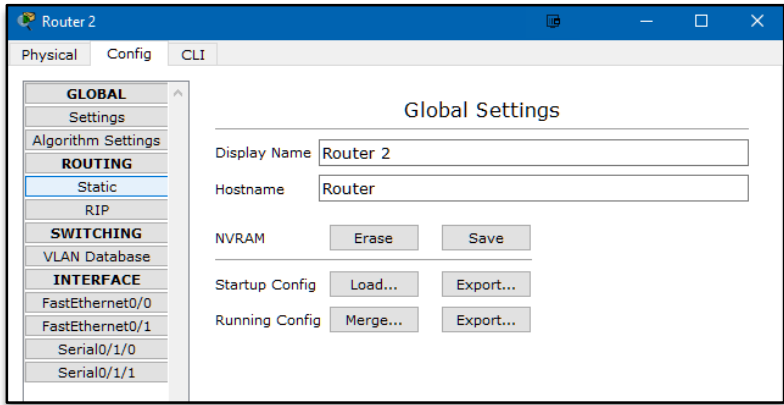

3. Under **ROUTING**, select the **Static** bar.
4. In the **Static Routes** box, select **192.168.2.0/24 via Serial0/1/0**, then click the **Remove** button.

5. The **static route** will be removed.

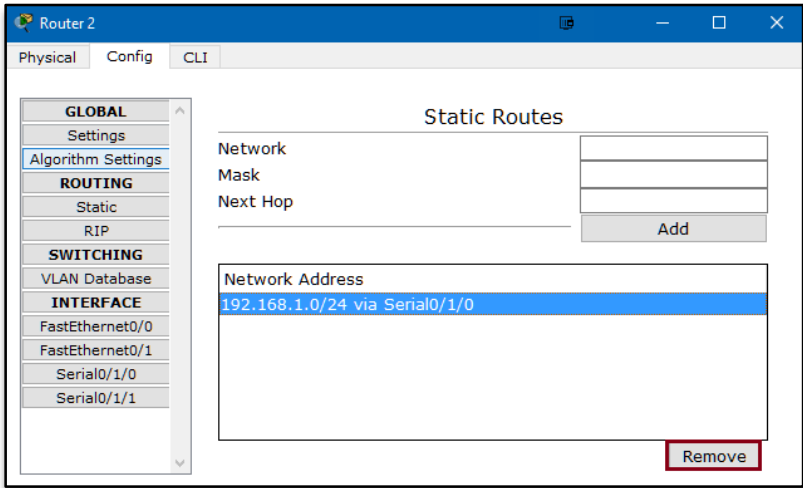

6. Close the window, and click on **Router 2** and select the **Config** tab.

7. Under **ROUTING**, select the **Static** bar.

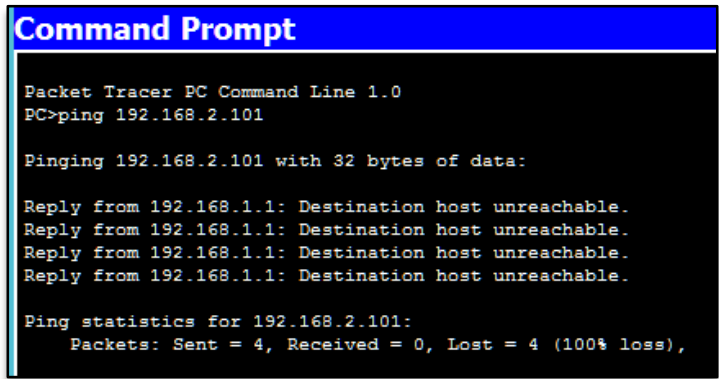

8. In the **Static Routes** box, select **192.168.1.0/24 via Serial0/1/0**, then click the **Remove** button.

9. The **static route** will be removed.

10. From **PC 1**, try pinging **PC 4 (192.168.2.101)**. You should get a **Destination host unreachable** response, because that portion of the network can no longer be found. This is what we want 😊

```
Packet Tracer PC Command Line 1.0
PC>ping 192.168.2.101

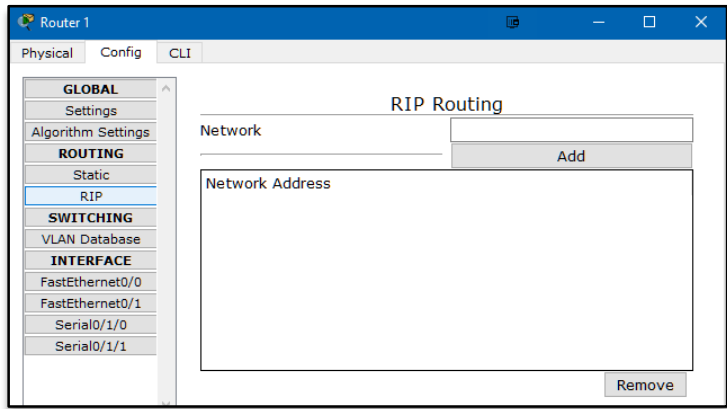

Pinging 192.168.2.101 with 32 bytes of data:

Reply from 192.168.1.1: Destination host unreachable.
Reply from 192.168.1.1: Destination host unreachable.
Reply from 192.168.1.1: Destination host unreachable.
Reply from 192.168.1.1: Destination host unreachable.

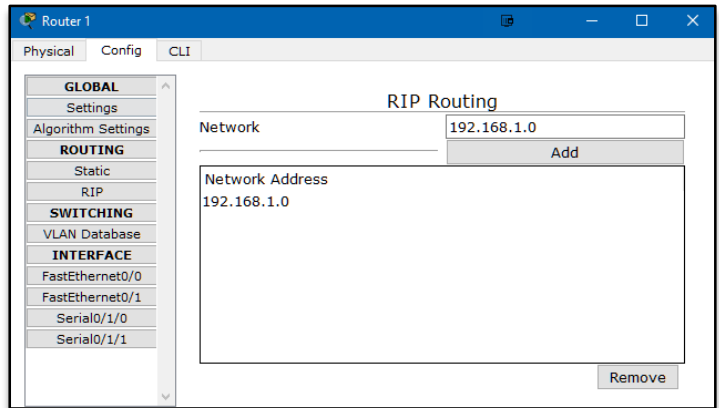

Ping statistics for 192.168.2.101:
    Packets: Sent = 4, Received = 0, Lost = 4 (100% loss),
```

11. Close the windows, and click on **Router 1** again and select the **Config** tab.

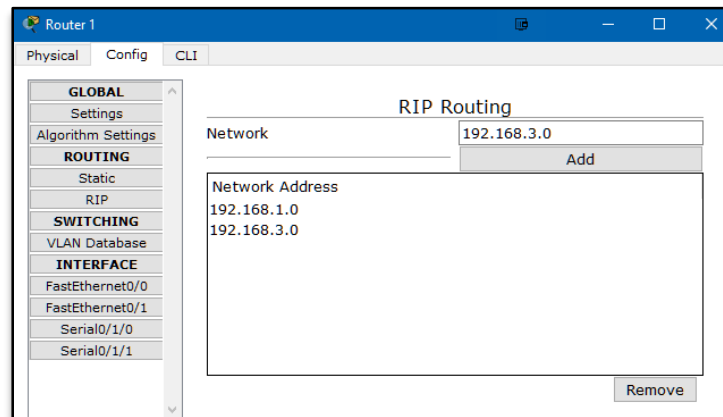

12. Under **ROUTING**, select the **RIP** bar.

13. In the **Network** box, type **192.168.1.0**, then click the **Add** button.

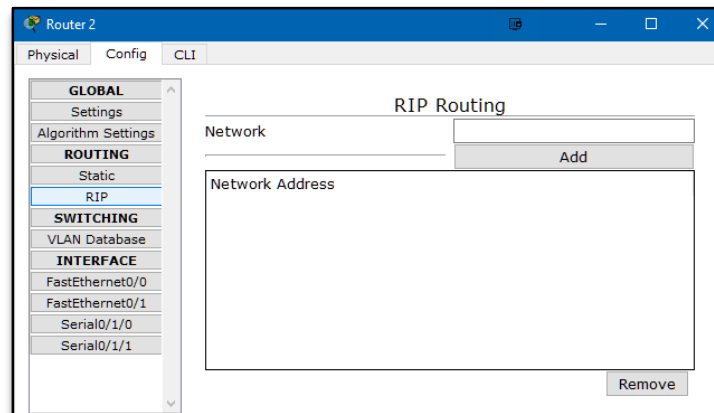

14. Next, in the **Network** box, type **192.168.3.0**, then click the **Add** button.

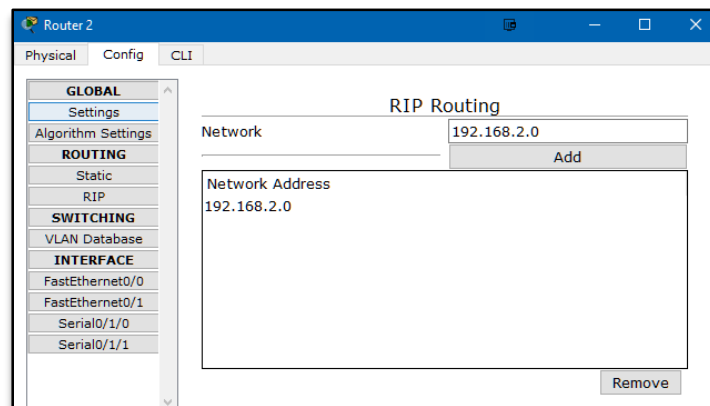

15. Close the window, and click on **Router 2** again and select the **Config** tab.

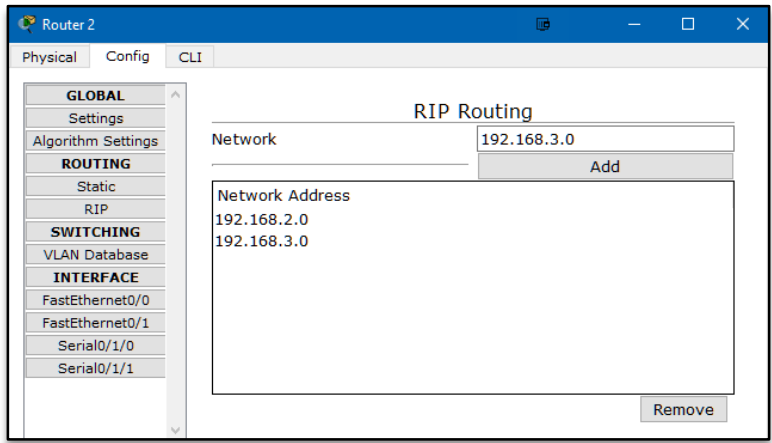

16. Under **ROUTING**, select the **RIP** bar.

17. In the **Network** box, type **192.168.2.0**, then click the **Add** button.

18. Next, in the **Network** box, type **192.168.3.0**, then click the **Add** button.

19. Close the window, because that's it. You're all done! Now all **devices** should be able to **ping** all the **interfaces** and other **devices** successfully 😊

20. Click on **PC1**, and select the **Desktop** tab.

21. Select **Command Prompt**, and try pinging each of the following:

- a. Ping 192.168.1.100 (itself)
- b. ping 192.168.1.101 (PC2)
- c. ping 192.168.1.1 (Router 1 fa0/0)
- d. ping 192.168.3.1 (router 1 s0/1/0)
- e. ping 192.168.3.2 (router 2 s0/1/0)
- f. ping 192.168.2.1 (router 2 fa0/0)
- g. ping 192.168.2.100 (PC3)
- h. ping 192.168.2.101 (PC4)

```

Command Prompt
Pinging 192.168.2.101 with 32 bytes of data:
Request timed out.
Reply from 192.168.2.101: bytes=32 time=5ms TTL=126
Reply from 192.168.2.101: bytes=32 time=1ms TTL=126
Reply from 192.168.2.101: bytes=32 time=1ms TTL=126

Ping statistics for 192.168.2.101:
    Packets: Sent = 4, Received = 3, Lost = 1 (25% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 1ms, Maximum = 5ms, Average = 2ms

PC>ping 192.168.2.101
Pinging 192.168.2.101 with 32 bytes of data:
Reply from 192.168.2.101: bytes=32 time=7ms TTL=126
Reply from 192.168.2.101: bytes=32 time=2ms TTL=126
Reply from 192.168.2.101: bytes=32 time=1ms TTL=126
Reply from 192.168.2.101: bytes=32 time=2ms TTL=126

Ping statistics for 192.168.2.101:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 1ms, Maximum = 7ms, Average = 3ms

PC>
    
```

22. Test doing the same from **PC2**, **PC3**, and **PC4**.

END OF MINI-LAB 06
